Slide Activities for multiple p. They solve their problems and then share your information p. My student who created the football problem was one of my best students, but he thought in the theater, he was interested and did a 3 job of completing the task. I teach in a block hour and it takes most students a good 2 per cent class to make this package done. (4) Tasky and fun Twizzler decay activity. Each student receives 4 cards p tell them how much money they have inherited, how much time they have to invest, and 2 different compositional p to compare. They love to look at the other posters and they also love to criticize them. Á Á I learned to keep an eye on the horses. It would be difficult to time these p and expect students to be completely finished with each task. Students learn to manipulate the p so that the balls do exactly what they want. Á Á excited to share with you my list of 9 Exponential Fun Activities! (1) Exponential Fun Poster Activity: This is my first exponential fun activity that I created. (3) Tower of Hanⁿi Find a game Tower of Hanⁿi on the internet or just Students to download an application on your phone. Check check this activity in my store: Exponential Functions Activity (2) Exponential Function Activity in Google Slides Form Out of necessity last year I created a Google Sides version of the above lesson. The number of disks and the smallest number of moves is an exponential function. For some reasons, students do very well with task cards. This is a free YOG that I like to share with you! I love using this as a quick opener. They have to write the title of the poster, determine the domain and scope, decide whether the situation is one of growth or decline, and then write one thing they can ask themselves about the situation. The goal is to change the equations so that when the marbles are dropped, they travel the correct path and reach all the stars, which means success. Some students, when creating graphs, will take the exact y-values and place these numbers on the y-axis. One teacher used a speed dating strategy in which the students worked out a problem on their own and became the experts. This activity is the ultimate collaborative and differentiable activity. The activity of the Sierpensi Triangle, the Hanoi Tower and several other exponential phenomena are discovered and patched together during my Exponential Seasons Resource. I was going to postpone this for a few weeks while I worked on some other things, but decided to go ahead and push some changes to the site today, since the rest of the changes were all behind the scenes, so to speak, and should not have an impact on the site or the people using it. Each teacher has his or her unique way of teaching and his or her unique situation in the classroom. Without going into too much detail about the decision, I am making a change to the "source" documents that will make generating the chapter/section pdf much more difficult, while making it easier to generate the full book pdf and (hopefully) arap arap "sknil" ret etimrep em sections of the book are active in the pdf files. I also added a small space between lines of text. Below is one of the slides I have graded. Á Á Amazing! This set of task sheets would be a great review before an assessment. If you like digital resources a lot, you will love this. I copy the pages as a booklet. The object of the game is to move the discs from one pile to another in the least amount of moves. Á Á Fun to let the students play for a while and have them create a table of the number of disks and the least number of moves and then see if they can figure out the exponential function. I help the students make various representations to ensure that they know what is expected of them when they start their posters. I want each student to have an idea of how they should work in one of these scenarios. Topics covered are transformations, e, compound interest, 1/2 life, growth, decay, domain, range, y-intercepts, asymptotes, an inverse problem, writing equations from tables, growth and decay model scenarios, a paper folding activity, evaluations, and bell and loop closures. I tell them to title the poster and make sure that each person in the group writes on the poster. I really like them and think they are super fun. The students measure a Twizzler and note the data on a graph. I was 2000 miles away monitoring the activity. If you put these same 20 questions in a spreadsheet, some students will get bored or overwhelmed with thinking about doing a spreadsheet of 20 questions and they will give up. I get chills when I see this! (Not a very creative poster, either!) Once the posters have been created, it's time for the Gallery Walk! I want students to look at least 4 posters. The student folds the Twizzler in 1/2, cuts and measures.
